DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1, 3-7, 9, 37-54 are rejected under 35 U.S.C. 102(a) as being anticipated by Martin et al. (Martin), article entitled, "Orthogonal Self-Assembly on Colloidal Gold-Platinum Nanorods."

The Martin patent discloses the claimed method of forming the segmented nanoparticle comprising the plural steps of depositing a plurality of metals, such as gold, platinum into a nano-pore template, wherein at least one depositing steps is an electrochemical deposition and releasing the segmented nanoparticle (see page 1022 schemes 1 and 2). The reference further discloses the same type of template, such as alumina (see page 1022). The reference further discloses the same range of sizes of the particles (see pages 1022 and 1023).

Therefore, the claims are anticipated.

Claims 1, 3-7, 9, 37-54 are rejected under 35 U.S.C. 102(a) as being anticipated by Routkevitch et al. (Routkevitch), article entitled, "Electrochemical Fabrication of CdS Nanowire Arrays in Porous Anodic Aluminum Oxide Templates."

The Routkevitch patent discloses the claimed method of forming the segmented nanoparticle comprising the plural steps of depositing a plurality of metal oxide particles into a nano-pore template, wherein at least one depositing steps is an electrochemical deposition and releasing the segmented nanoparticle (see page 14037-14039). The reference further discloses the same type of template, such as alumina (see page 14037). The reference further discloses the same range of sizes of the particles (see abstract).

Therefore, the claims are anticipated.
